

BT Group Scam Guard transcript

Scam Guard gives you three powerful ways to fight fraud by protecting your calls, your personal data and your online activity. All from as little as one pound a month.

Scam Guard's call labeling uses AI technology to monitor incoming calls in real time and notifies you when it suspects a scam or nuisance call, so you're less likely to become a victim of fraud.

Scam Guard also provides dark web monitoring. Scam Guard protects your personal data, like your email, bank accounts and credit card numbers, and more. It'll notify you if any of it appears on the dark web, and give you tips on how to stay more secure online.

And that's not all, Scam Guard comes with three months free Cybersecurity Duo, powered by Norton, that gives you protection on up to two devices against viruses, malware and other online threats.

Take control with Scam Guard.
